## EXTERNALLY ADJUSTABLE MULTIFUNCTION REGULATOR

### ■ 3 OUTPUTS

- Vo1 : output voltage variable from 5 to 12 V;  
limit current : 1.2 A.
- Vo2 : output voltage variable from 5 to 12 V;  
limit current : 1.2 A.
- Vo3 : output voltage variable from 5 to 12 V;  
limit current : 1.2 A.

### ■ ENABLE INPUT FOR EACH REGULATOR

### ■ FEEDBACK INPUT FOR EACH REGULATOR

### ■ SHORT CIRCUIT PROTECTION TO GROUND

### ■ OVERCURRENT WARNING

### ■ DRIVER FOR EXTERNAL SCR (CROWBAR PROTECTION)

### ■ THERMAL SHUTDOWN

Each regulator is current limited and furthermore an OR-ed warning signal is output (open collector, active low output) when the current in a regulator goes above an over-current threshold (1 A typ for any regulator).

When one output voltage is higher than 20% typ of its nominal value (for instance in case of input-to-output short circuit), the crowbar output pin is activated, triggering an external SCR (connected between input and ground) that blows the input line fuse.

### DESCRIPTION

It is a monolithic Multifunction Voltage Regulator; it contains 3 regulators, (REG1, REG2, REG3) each one with an enable input and a feedback input, to allow the voltage setting via external resistive divider.
